RUVITEX PVC OUTLET ROUND PARAPET L500 D90

PRODUCT DATASHEET

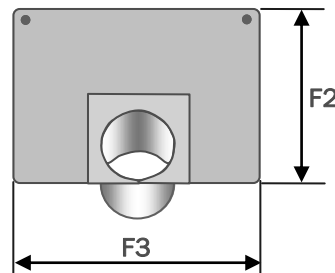

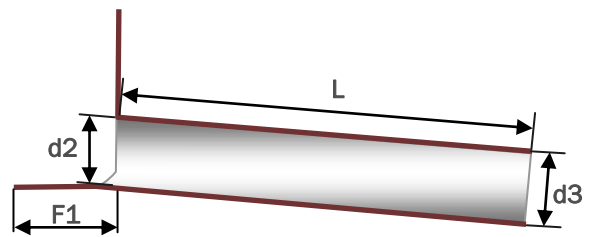

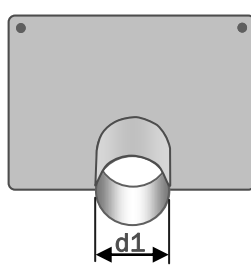

RUVITEX PVC OUTLET ROUND PARAPET L500 D90

Ruvitex PVC Outlet Round Parapet L500 D90 Ruvitex through wall outlets are intended to form a watertight seal between Ruvitex roof membranes and external roof drainage pipe work and hoppers.

The smooth internal flange provides a suitable welding area for the Ruvitex roof membrane. The flange and the membrane being welded must be clean and free from contamination prior to welding. Check seam with seam probe after welding.

The round pipe is intended to fit into a wide range of external rain water drainage pipe work. It is important that the shank of the outlet and the drainage pipe work are pushed together firmly and securely to be effective.
